Customer churn prediction

Data Flow Diagram:

- A Data Flow Diagram (DFD) is a graphical representation of how data moves through a system. It shows the flow of information between external entities, processes, and data stores.
- In this project, the DFD represents the working of the **Customer Churn Prediction System** by illustrating how user and admin inputs are processed, how customer data is stored, and how churn predictions are generated.

Level 0 – Context Diagram

This level provides a high-level overview of the system.
It shows:

- User interacting with the system (view offers, view bills, request network change).
- Admin managing system operations (add offers, generate bills, activate/deactivate accounts).
- Telecom Database storing customer and churn-related data.
- The central process: Customer Churn Prediction System.

Level 1 – Detailed Diagram

This level explains internal processes in detail. It includes:

1. User Management Module
2. Admin Management Module
3. Churn Prediction Module
4. Graph & Reporting Module
5. Database Management

DFD for Customer Churn Prediction
